ClaimCascade

MISSED-CALL VALUE CALCULATOR

WHY A MISSED CALL IS THE REAL LEAK

The claim you miss is usually not waiting around

Use your own call volume to estimate what even one recovered claim could mean. The numbers below are a conservative example — every input is editable at the live calculator.

MISSED CLAIM CALLS / MONTH	% QUALIFIED OPPORTUNITIES	AVG. FIRM VALUE PER CLAIM	% REASONABLY RECOVERABLE
8	40 %	$2,500	25 %

RECOVERED / MO	PROTECTED MONTHLY	PROTECTED ANNUAL
0.8 claims	$2,000 per month	$24,000 per year

Even one recovered claim can change the month.

How this is calculated: recovered opportunities = missed calls × % qualified × % recoverable. Protected value = recovered opportunities × average firm value per claim. These are estimates based on numbers you control — not a guarantee, and not based on ClaimCascade customer data.

Run this with your firm's real numbers — it takes under a minute.

Map your missed-call leak

ClaimCascade performs intake and routing only. It does not provide coverage advice, claim strategy, legal advice, or act as a licensed public adjuster.
